San Antonio Heights flood protection project approved

SAN BERNARDINO - The Board of Supervisors approved a \$720,005 flood control project on Tuesday that will provide protection for residents in the unincorporated foothill community of San Antonio Heights.

The San Antonio Heights Storm Drain project involves the construction of an inlet upstream from Paloma Curve and Ravina Curve and about 900 feet of underground culvert. The new storm drain will connect to an existing storm drain owned and operated by the City of Upland.

"Homeowners in the area called and told us their backyards regularly flood after it rains, so we asked Public Works to determine how to stop this persistent flooding," Second District Supervisor Paul Biane said. "The project approved by the Board today is another great example of how residents can help us help them by calling to report unsafe conditions in their community."

Construction of the flood control facilities will begin immediately, and Public Works expects to complete the project by February.
